## Notes

Cassara multi-length slabs are designated to be installed in strips with transversal joints staggered by at least 100 m.

Setting of joint-filling sand: Cover the vibrating plate with a removable rubber tread (neoprene or polypropylene).

Cover the snow removal tools with Teflon or neoprene protectors to minimize the risk of damage from scratches or concrete shards.

Laying patterns: These laying patterns are by way of example only and represent only a few of many possibilities. Permacon shall not be responsible for the excess or shortage of pavers resulting from installation according to these laying patterns.

Given the high weight of this slab, it is highly recommended to use suction-based lifting equipment for handling and placement (avoid manual installation).
